Needs & wants List（Urology）

Diseases	• Lower urinary tract diseases (LUTD) (except male menopause, infections)
Object	• Drug Discovery Seeds • Drug targets and concepts • Technology that can be utilized for drug discovery
Seeds	Small molecules, peptides or new modalities that satisfy either of the following requirements: • Demonstrate a direct effect on the cause of a disease in vitro or be strongly expected to do so. • Demonstrate an ameliorating effect in an animal model.
Targets	Targets for the treatment of the above diseases or improvement of the clinical condition.
Related technologies	• Animal disease models that reflect the human clinical condition • Assessment of urination dynamics and sensory nerve function in vivo • Tools to assess reproducutive functional in animal • Cell-based assays that reflect the disease condition • Technologies to increase the delivery of drugs to the lower urinary tract • Novel devices or services that support urological patients and are utilized in clinical trials
