

Needs & wants List (Gynecology)

Diseases	Gynecologic disorders (except for cancer, infections)
Object	• Seeds
	• Targets, concepts
	• Technologies
Seeds	Small molecules or peptides that satisfy either of the following requirements:
	• Demonstrate a direct effect on the cause of a disease in vitro or be strongly expected to do so.
	• Demonstrate an ameliorating effect in an animal model.
Targets	• Non-hormonal targets that regulate hormone concentration and ovulatory function
	• Non-hormonal targets for the treatment of the above diseases
Related technologies	• Animal disease models that reflect the human clinical condition
	• Cell-based assays that reflect the disease condition
	• New devices that act only in the uterus
	• Minimally invasive technologies for observing or evaluating endometriotic lesions
	• New biomarkers that are involved in the progression of the disease condition
