

Needs & Wants List (Hematology)

Diseases	<ul style="list-style-type: none">• Hematological malignancies• Diseases related to hematology
Object	<ul style="list-style-type: none">• Seeds• Targets• Technology that can be used in drug discovery
Seeds	<ul style="list-style-type: none">• Novel substances that can be potential therapeutic drug candidates for hematological diseases• Substances that have innovative characteristics compared with existing drugs• Exceptions:<ul style="list-style-type: none">Substances whose mechanism of action is not clearSubstances for which the structure of the active form has not been determined
Targets	<ul style="list-style-type: none">• Targets that can be used in the treatment of hematological diseases• Unpublished targets are desirable
Related technologies	<ul style="list-style-type: none">• Highly original assays that can be used to screen drug candidates for hematological diseases• Assay systems for evaluating blood cell differentiation and function• In silico assays to predict efficacy, safety and pharmacokinetics in humans• Animal disease models that reflect the human clinical condition• Technologies for drug accumulation specific to hematopoietic cells or bone marrow
